Return to Eden

Level 9 Computing

Return to Eden is set in the 24th Century, on one of the weirdest planets around. It has well over 200 locations, with lots of fun and puzzles. And the Amstrad, CBM64 and Spectrum versions have graphics: about 240 pictures each!

Level 9 Computing specialise in adventures. Big adventures, with detailed scenery and interesting storylines. This means more enjoyment for you and we'll send a free clue sheet, with hundreds of answers, if you get stuck.

If you think that you're losing out on adventure because we've added pictures, by the way: don't! There is as much text and as many puzzles in this game as in previous Level 9 adventures. We've just had to use even better compression techniques and every bit of memory in your micro.

You play Kim Kimberley, secret agent. Escaping from false imprisonment aboard a colony starship, you are stranded in the alien jungle of Eden. Your only hope is to reach the robot city of Enoch, said to be fighting a valiant war against killer plants in this spectacular SF adventure.

Investigate the air bush, find your roots and watch out for the parrot! The alien corn is tricky, "Pepsy" Koala is mischievous and the least said about the city robots the better.

Return to Eden will amuse, bemuse and entertain — and you're doing well if you finish it in less than a month. Good Adventuring!

RETURN TO EDEN REVIEW

"The appearance of a new program from Level 9 is a flag-day for all aspiring adventurers and, in my household, a signal for the cat to hide under the bed for the duration against the inevitable moment when I go rampaging through the flat, a wild look in my eyes, muttering ferociously about bricklaying birds, nudist beaches and the like. Since Return to Eden, the sequel to Snowball is out, the cat may be in hiding until Christmas...
One major different between this and former Level 9 efforts is that the Spectrum and CBM64 (and Amstrad) versions have graphics of a very high quality that can be switched off if required. The scope of the vocabularly appears unscathed by this addition.
Even experienced adventurers will probably get fried a few times by the avenging engines of the Snowball, before discovering how to take shelter. But, once that hurdle is passed, the real adventure begins and it's a lulu."

— Popular Computing Weekly

GUARANTEE
We'll replace the enclosed cassette/disk/microdrive cartridge if you return it to Level 9. If you have problems in the month after purchase, a replacement of the same type is free.

Otherwise, please enclose £1 for a replacement cassette or £2.50 for a disk/microdrive cartridge (if available). Add £1 if outside the UK.
